# Additional information and flow chart

### How is our order signal triggered

**New Trend** Signal

Entry Check

Point

**New Trend Signal (NTS)** 

Name: MACD 1

**Entry confirmation check point** 

(ECCP)

Name: MACD 2, MACD 3

2nd, 3rd, 4th, signal

2nd Signal, 3rd Signal, 4th Signal trigger setting (refer to the document we sent earlier)

Once a new trend is detected (conditions are met), it will send a signal."If the entry checkpoint (ECCP) is set for MACD 2 or MACD 2 & 3, a new trade alert will sent to the backend if conditions are met

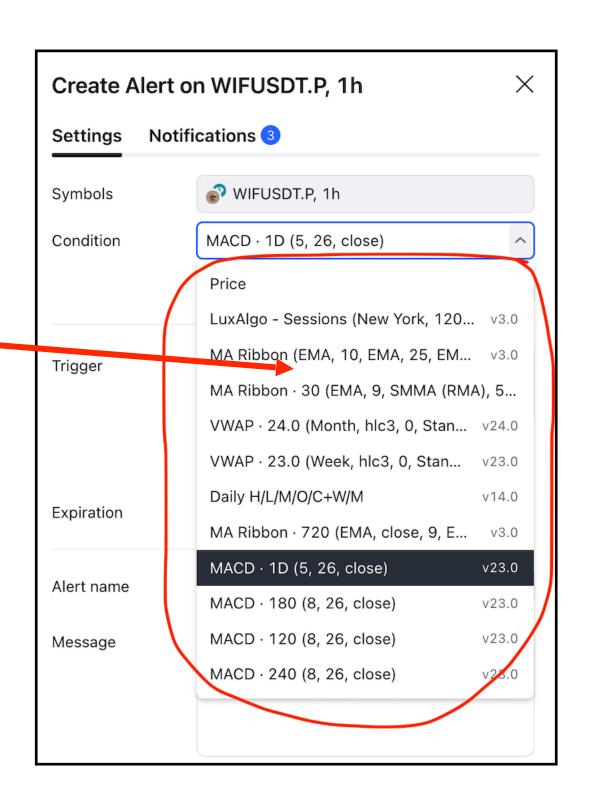

> Once the ECCP conditions are met, it will send an order signal to our backend to trigger a new order.

2nd Signal, 3rd Signal, 4th Signal entry direction has to follow the MACD 1's trend direction

## Alert creation Selection

- 1) Long 1st Signal
- 2) Short 1st Signal
- 3) Long 2nd Signal
- 4) Short 2nd Signal
- 5) Long 3rd Signal
- 6) Short 3rd Signal
- 7) Long 4th Signal
- 8) Short 4th Signal
- 9) Long 5th Signal
- 10) Short 5th Signal

All these alert creation must appear here in our indicator.

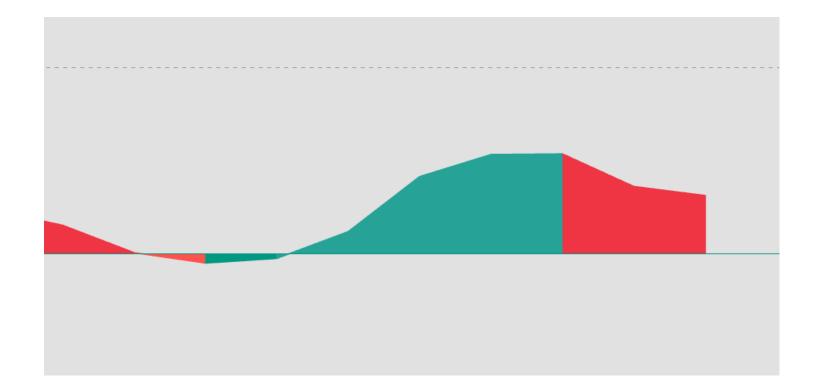

## Trend change condition

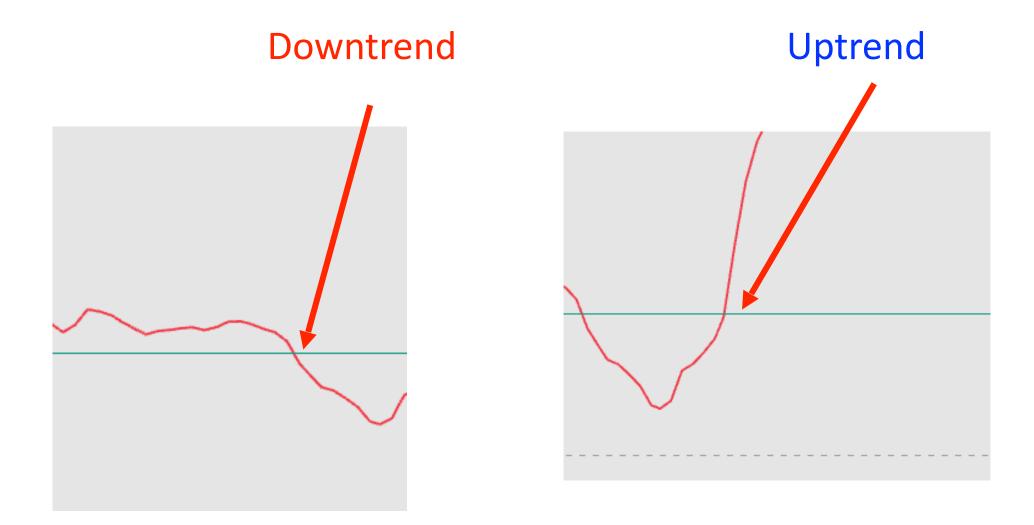

## **Key Points-1**

- 1. MACD histogram turns from RED to GREEN = Uptrend
- 2. MACD histogram turns from Green to RED = Downtrend

Green = Uptrend Red = Downtrend

- 1. MACD signal line crossing above the zero line = Up trend
- 2. MACD signal line crossing below the zero line.= Down Trend

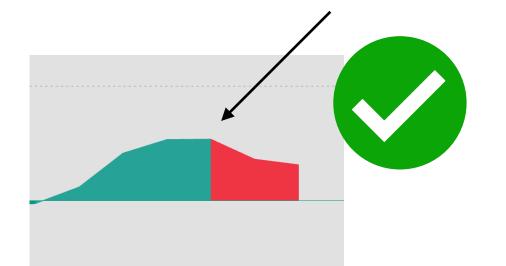

#### Red cross below blue = downtrend

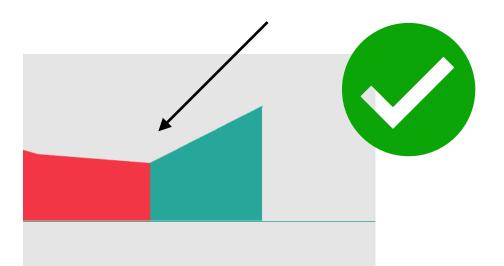

## Trigger condition

#### **Change color**

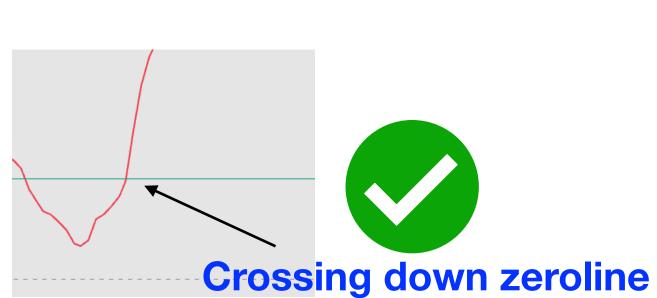

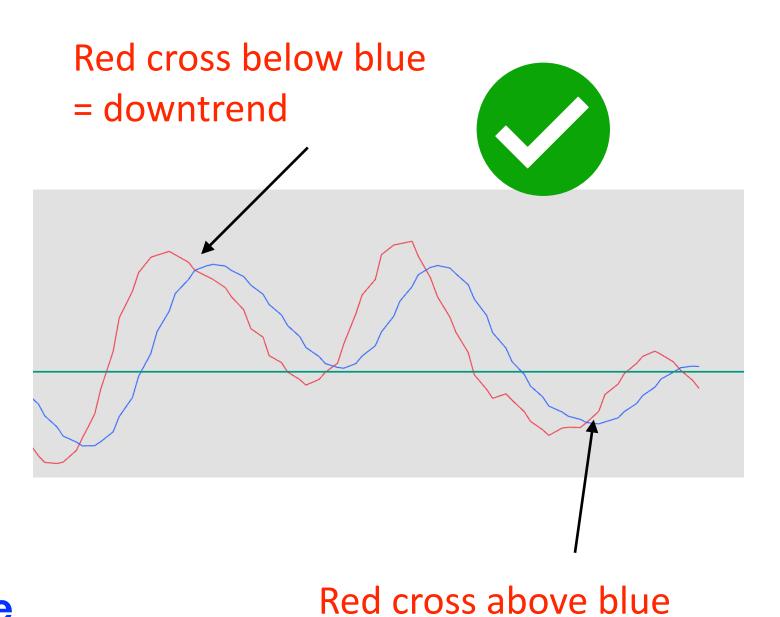

#### **Change color**

#### **Crossing down zeroline**

= Uptrend

## **Entry Confirmation Check Point**

MACD 2

MACD 3
